

We are happy to announce:

The 7th Annual C3 users meeting

The aim of the user meeting is for the users and other interested parties to informally get together to work out how the C3 can best meet the community's needs. We will have a few short presentations, including:

Alan Riboldi-Tunncliffe (Australian Synchrotron) – The C3-AS in plate screening service
Bevan Marshall (LaTrobe University) – Writing a crystallisation paper – and getting it right.

The presentations are leading us into this year's theme, which is **CRYSTALLISATION COMMUNICATION**: why this is important, why it is hard, and what we can do to make it easier.

The whole point of the user meetings are for us all to have a *conversation*¹(see the trend here?) about crystallisation, what works, what doesn't, what would be nice to have, future directions, cool tips etc. Conversations work better if they are not one sided, so as always, there will be a ~~bribe~~ prize for the best question/comment.

If you have a burning need to present at this soiree, please contact us: c3@csiro.au

There will be refreshments after – thanks to the generous sponsorship of AXT Pty Ltd

When: Friday, 22th March 2-4pm
Where: CSIRO Parkville's Conference Room (2nd floor)
343 Royal Parade
Parkville VIC 3052

RSVP: c3@csiro.au, by the ides of March²

1. There is a chance that I will arbitrarily pull someone from the audience to give an impromptu 3 minute spiel about crystallisation. Wouldn't that be fun?
2. That's the 15th, for those who weren't forced to read *Julius Caesar* at school. (you know, the whole "the ides of March are come. Aye, Caesar, but not gone" thang)
