Adaptive Software Services

Data-Driven Approaches & Cyber Security

- Data and Cyber Security
 - Data is the key motivator of cyber security problems
 - Data-driven technologies become important for cyber security solutions
 - AI/ML are enabling most of the technological innovations for predicting, preventing, detecting, and responding to cyber vulnerabilities, threats, and attacks.
- The panel focuses on
 - The data-driven nature of the cybersecurity threats and solutions
 - The challenges of identifying and leveraging the full potential of Data-driven technologies for cybersecurity
 - The current and envisioned applications of AI/ML for building resilience against the cybersecurity threats, vulnerabilities, and attacks.

The Panel

- Dr Jackie Craig, Independent Consultant
- Prof. Vallipuram Muthukkumarasamy, University of Griffith
- Prof. RK Shyamasundar from IIT-Bombay
- Prof. Anton Van Den Hengel – Australian Institute for Machine Learning
