

Environomics Future Science Platform • Science Showcase

Canberra, Monday July 29th, 2019

University House – Australian National University

Welcome!

Environmental genomics is a fast evolving, intellectually challenging and fascinating research area. But, more importantly, it has huge untapped potential to deliver new tools and knowhow for the benefit

of the environment and humanity. The Environomics Future Science Platform is an effort to grasp this opportunity and, as our tagline says, we are ...

"Reinventing how ecosystem health, change and threats are measured, and finding new resources in nature."

It's pleasing to look back and see how far we've come in the past two years - major science achievements (as will be revealed today!), training workshops in new science methods, crossdisciplinary symposia, a fresh-faced cohort of postdocs, overseas presentations and visits to leading labs. We've also been reviewed and presented to the CSIRO Board and passed with flying colours.

Today's event is designed to showcase our diverse science portfolio to our partners and colleagues and to identify how these new and developing platforms can have impact. There is great technical depth and thought behind all of the science, but today our focus is on take-home messages – how technical achievements and real-world problems are being addressed through the development of new genomic technology and knowhow.

I know we can all look forward to an energetic and thought-provoking meeting. I'm excited!

Cheers,

Olly

What to expect

There are two components to Monday's meeting:

- MONDAY AFTERNOON: Science showcase. Each Environomics FSP projects will make a 5minute lightning presentation. To keep it snappy we will have a ~7-minute group Q & A session after every three presentations.
- MONDAY EVENING: After post-showcase drinks we will be impressed by a plenary presentation from Professor Matt Trau from the University of Queensland's Australian Institute of Biotechnology and Nanoscience. Matt's expertise is in nanotechnology for the diagnosis and characterisation of cancer. This may seem an odd match for an environmental genomics audience, but biomedicine is the engine for much innovation in molecular science. As Matt will show, locating and characterising cancer cells in a human body is in many ways the same needle-in-a-haystack problem as finding rare molecules in the large, messy and complicated substrates environmental geneticists work with. The opportunities for cross-disciplinary cross-pollination are vast.

Programme

12pm – 5pm Location: Great Hall, ANU University House

12-1 PMArrival LunchPlease join us for lunch prior to the commencement of the meeting1 PMWelcome addressDr Linda Broadhurst, Dr Andrew Young, Dr Oliver Berry1.15 PMLightning 1 Novel methods for monitoring of plant-pollinator interactionsDr Liz Milla1.20 PMLightning 2 Rapid epigenetic age estimation for animalsDr Benjamin Mayne1.25 PMLightning 3 A paper platform for nucleic acid detection in the fieldDr Andy Bachler1.30 PMQ & ADr Andy Bachler1.40 PMLightning 4 Maximising tropical fish biodiversity detection with eDNA metabarcodingDr Cindy Bessey1.45 PMLightning 5 Unravelling diets and food webs: a place for eDNA analysisDr Gavin Rees1.50 PMLightning 6 eDNA in the Atlas of Living AustraliaMichael Hope1.55 PMQ & ADr Xiao Deng2.05 PMLightning 9 Understanding microbial diversity MicroorganismsDr Flavia Tarquinio2.10 PMLightning 9 Understanding microbial diversity managementDr Kristen Karsh & Dr Eric Raes2.10 PMLightning 1 Marrowing Seagrass Survival using managementDr Kristen Karsh & Dr Eric Raes2.10 PMLightning 1 OptA for temperate fish biodiversity knowledgeDr Sharon Appleyard3:00 PMLightning 10 cDNA for temperate fish biodiversity knowledgeDr Sharon Appleyard3:05 PMLightning 11 Can metabarcoding provide estimates of species' relative abundance?Dr Elise Furlan	TIME	ΤΟΡΙϹ	SPEAKER

4:00 PM	Lightning 18 Mobile species identification	Dr Luana S.F. Lins
4.05 PM	Q & A	
4:15 PM	Lightning 19 Mobilising collections through genomics	Dr Andreas Zwick
4:20 PM	Lightning 20 Genetic drift in living collections	Dr Anusuya Willis
4:25 PM	Q & A	
4:35 PM	Lightning 21 The CSIRO Fish Collection and degraded DNA	Dr Sharon Appleyard
4:40 PM	Lightning 22 Museum epigenomics: can natural history collections reveal temporal changes gene expression?	Dr Clare Holleley
4:45 PM	Q & A	
4:55 PM	Networking drinks and nibbles in the Foyer	
6.00 PM	Plenary by Professor Matt Trau (University of Queensland)	
6:45 PM	Find a seat for dinner	
7:00 PM	Dinner service	

Professor Matt Trau

BSc. (Hons) PhD UQ-CSIRO Chair in Personalised Nanodiagnostics Professor of Chemistry, School of Chemistry and Molecular Biosciences Senior Group Leader, Australian Institute for Bioengineering and Nanotechnology Director, Centre for Personalised Nanomedicine The University of Queensland

Making Precision Medicine Personal: Translating Genome-Wide & Point of Care Nano-Diagnostics into the Clinic (with cross applications in Environomics)

Modern medicine is currently transitioning to a new paradigm of precision and personalized care, where patients will be comprehensively screened and monitored for the detailed molecular abnormalities that characterise their specific disease. In the past decade, nanotechnology has provided new tools (e.g., next-generation sequencing) with unprecedented power to comprehensively interrogate genetic, transcriptomic and epigenetic information. The Centre for Personalised Nanomedicine at UQ is focused on translating these new technologies into a clinical setting, whilst simultaneously developing the next generation of point-of care diagnostic technologies to further empower the personalised and precision medicine approach. As part of a major National Collaborative grant funded by the National Breast Cancer Foundation ("Enabling clinical epigenetic diagnostics: The next generation of personalized breast cancer care", CG-12-07), our consortium recently published hundreds of epigenetic regions that area highly informative in cancer. These are now being validated in a real-time clinical setting, where comprehensive DNA, methyl-DNA and RNA information is collected in tandem and analysed. In this talk we will present data on the clinical translation of this approach, highlighting some of the positive impacts that such an approach can make on the "recovery trajectory" of cancer patients. Along with comprehensive DNA/RNA/methylated-DNA sequencing methodologies, several point-of-care nanotechnologies recently developed by our lab will be presented. These include novel technologies for detecting circulating free DNA/RNA/methyl-DNA, circulated tumour cells, exosomes and protein biomarkers. Several of these technologies have been developed collaboratively with US partners via a collaborative NIH grant ("Accelerated Molecular Probe Pipeline", U01AI082186-01).

In Dec 2018, Matt's laboratory published a paper in the journal Nature Communications describing a universal DNA nano-signature for cancer. This discovery and related detection technology has been dubbed the "10 minute cancer test". It has subsequently received broad media interest globally and has been selected by CNN and the journal BioScope as one of the "Top scientific advances" for 2018.

Acknowledgments

CSIRO acknowledges the Ngunnawal people as the traditional owners and custodians of the land upon which we are meeting. We also recognise the deep history and culture of Aboriginal people on this site and pay our respects to elders past, present and future.
