

# An EMI-shielded Module for the Parkes Cryo-PAF RFSoc Digitisers

Peter Roush, Ron Beresford, Paul Roberts, Sean Severs, Jeganathan Kanapathippillai

# Why have digitisers at the focus?

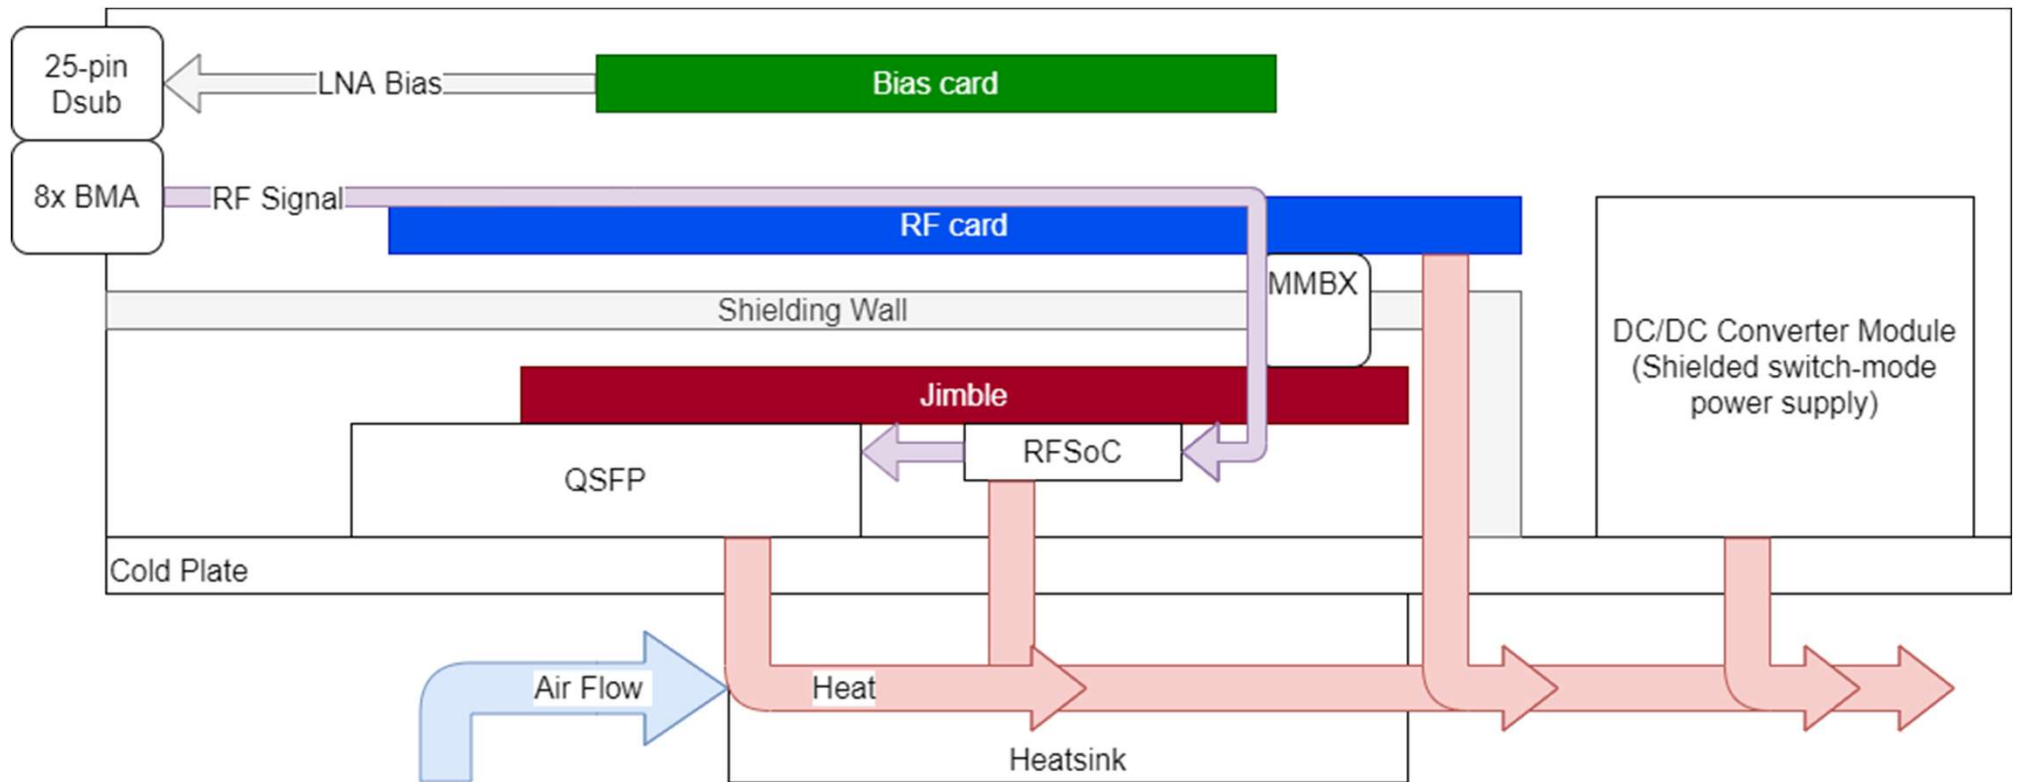

## Pros:

- High dynamic range to cope with Parkes RFI environment
- 26 fibre ribbons instead of 196 coax cables
- Avoids issues with long coax cables:
  - Insertion loss slope
  - Spectrum 'ripple' due to reflections

## Cons:

- Digitisers produce broadband RFI which can impact receiver sensitivity.
- High power consumption: switched-mode power supplies and active cooling.

Blind-mate RF Inputs

LNA Bias Card

RF Card

Feedthrough  
Filters

Switched-mode  
Power Supply

Outer EMI gasket

41 cm long

4.3 kg

130 W power dissipation

# Shielding design

- Priorities:
  - In-band radiated emissions
  - EMI coupled into LNA supply
- Multiple layers of shielding and filtering
- Gaskets have 100 dB nominal shielding effectiveness
- Electrical penetrations are limited to power and low-speed internal communications.
- All electrical penetrations use low-pass Pi feedthrough filters (75dB in-band insertion loss)
- LNA regulators with high Power Supply Ripple Rejection (PSRR)

# Fibre-Optics

Waveguide  
beyond cut-off  
acts as a high-pass  
filter with cut-off  
above 30 GHz

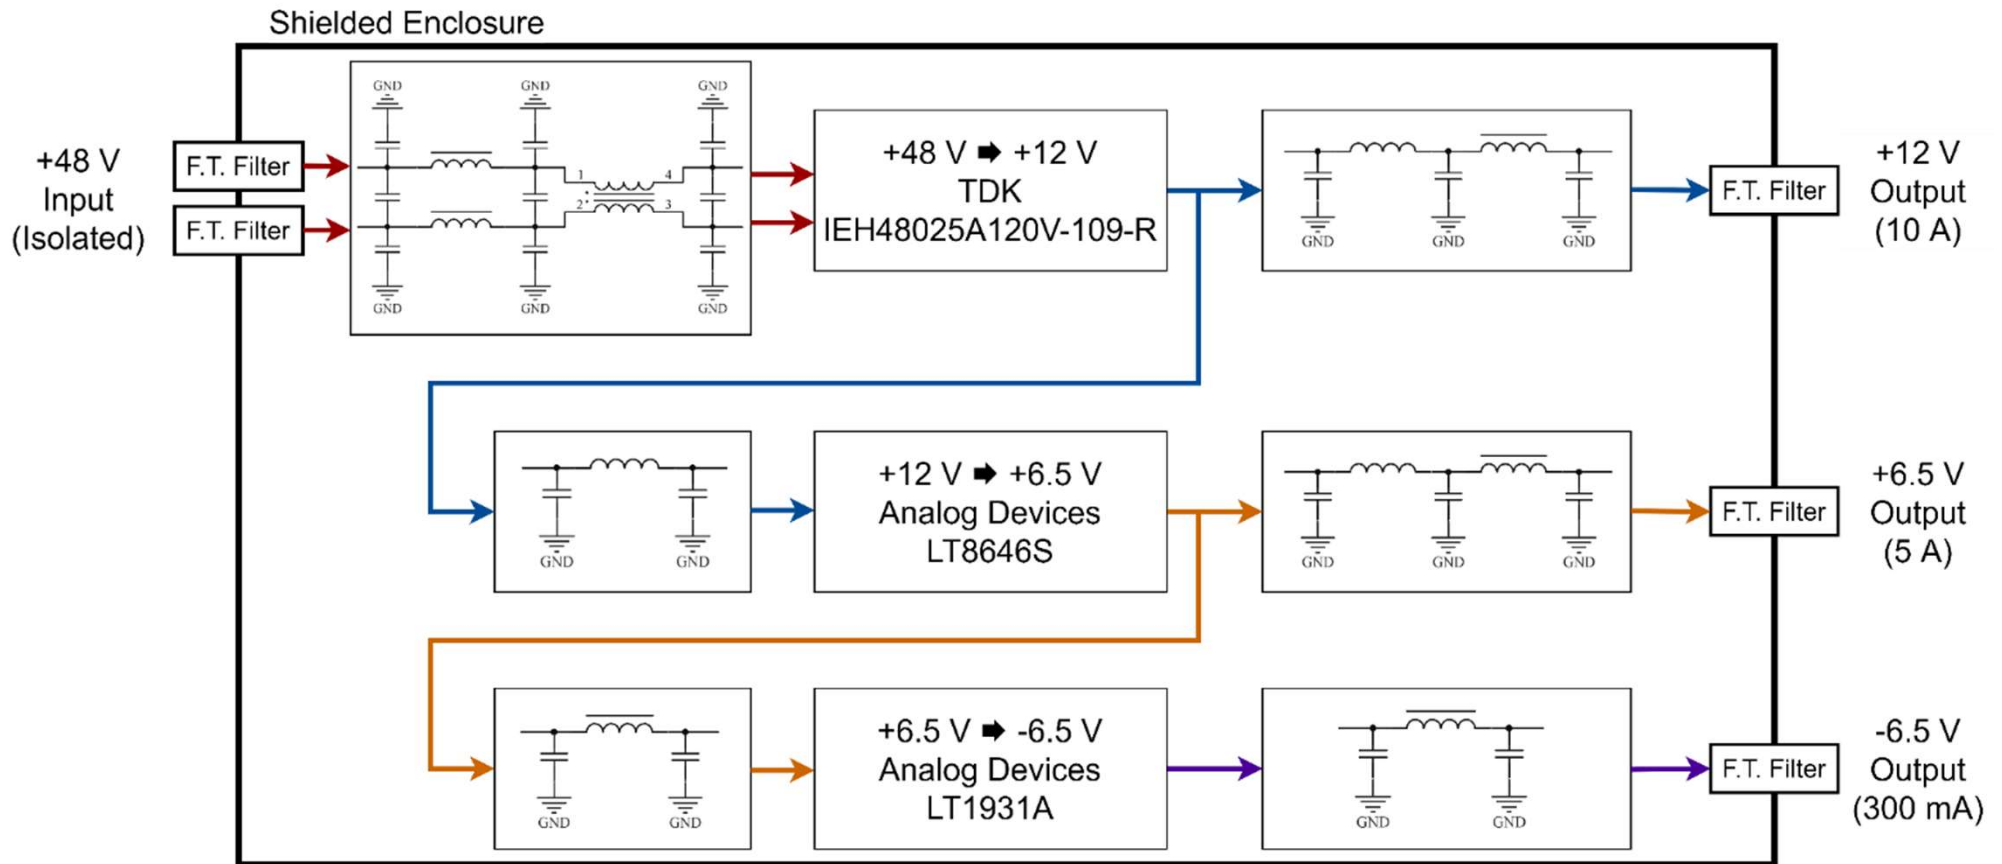

12-Fibre  
Breakout

Jimble

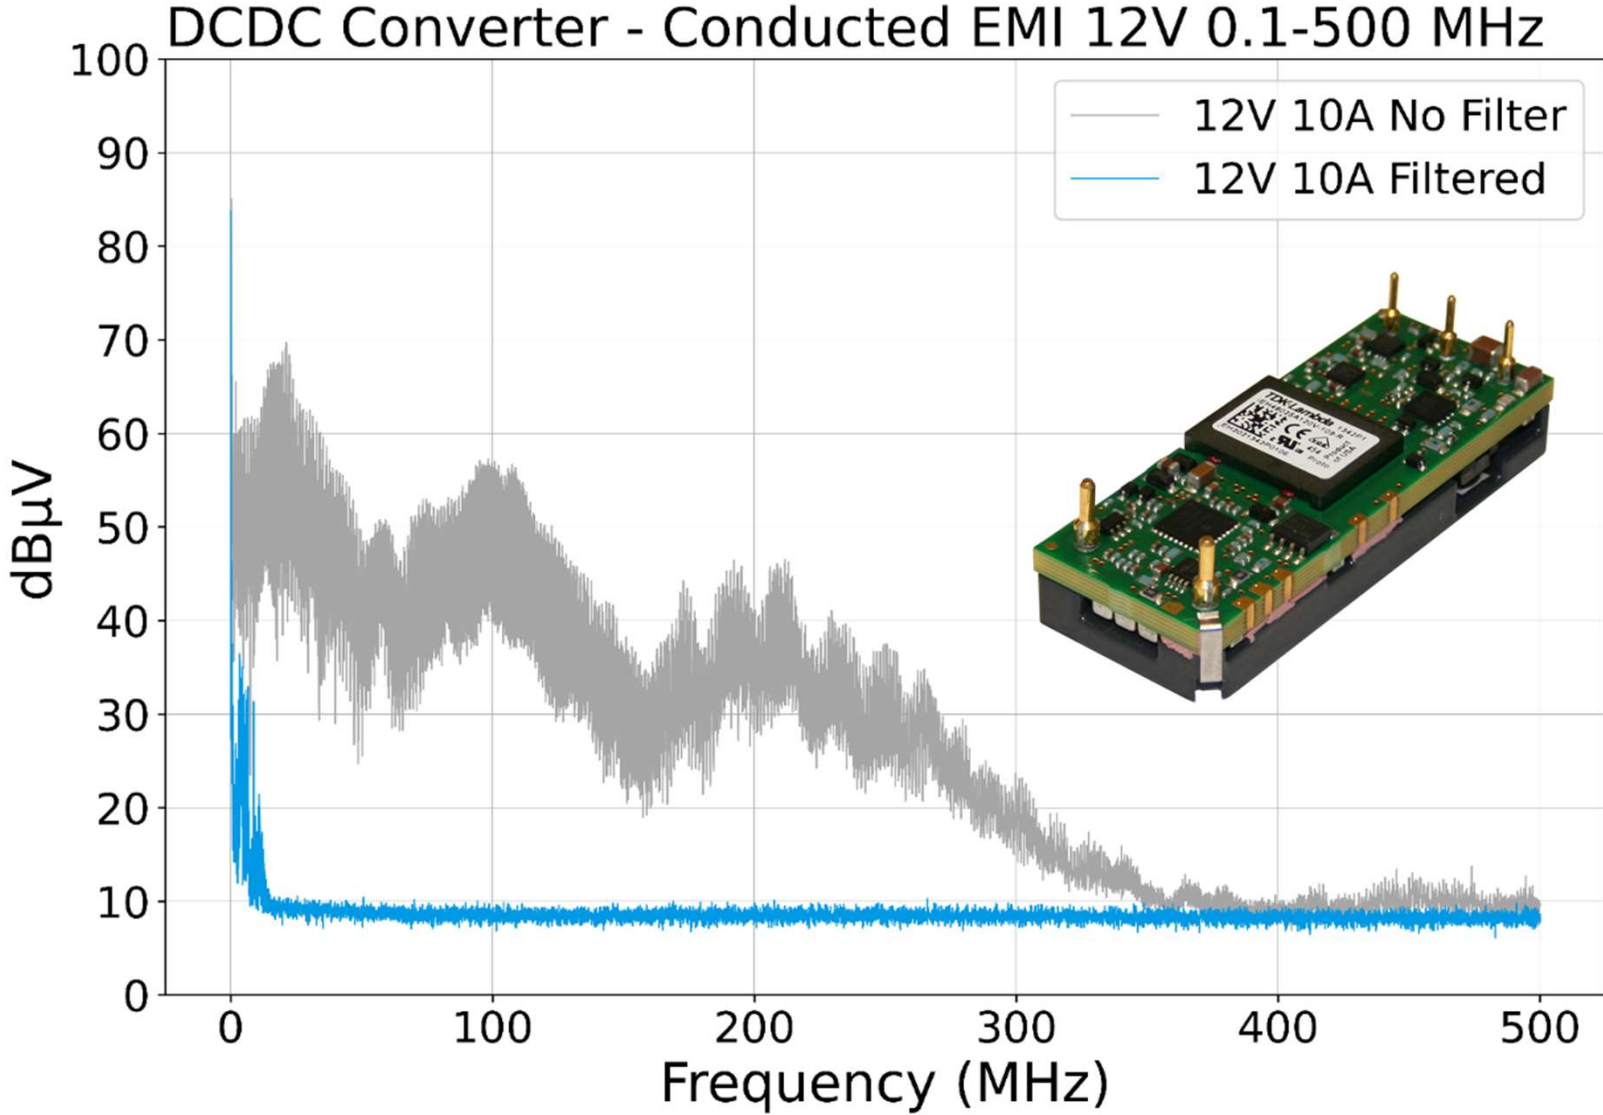

# Switched-mode Power Supply

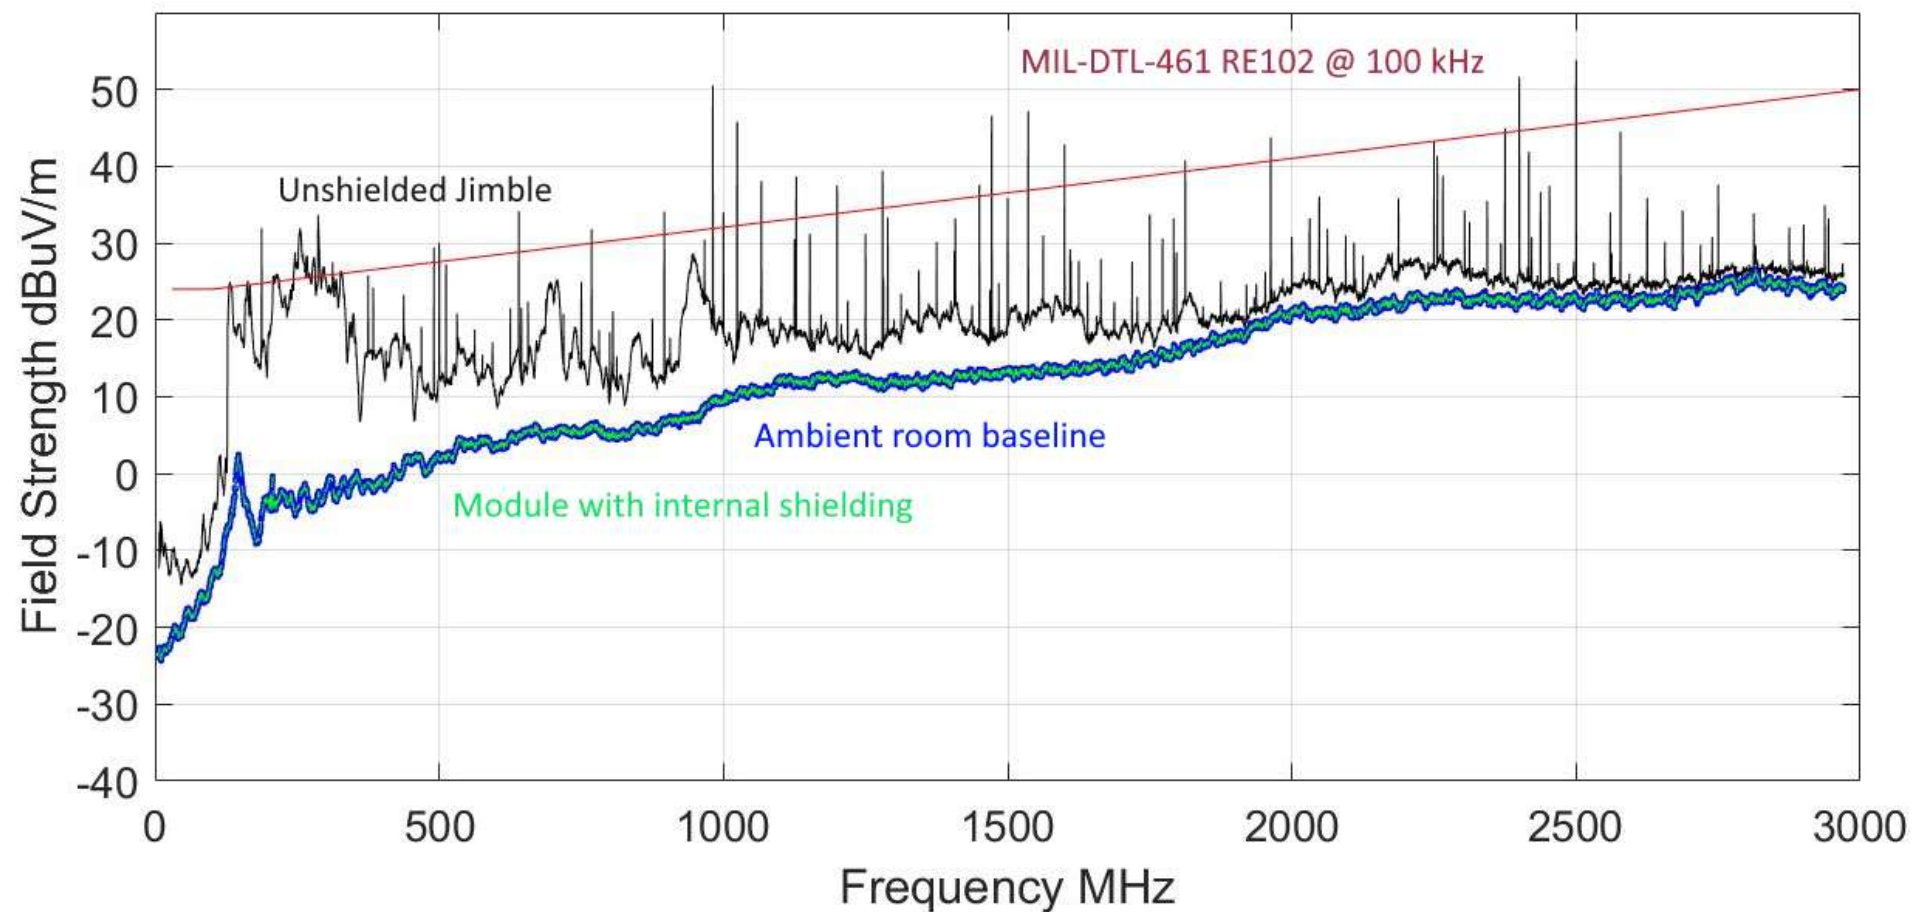

# Switched-mode Power Supply

# Radiated EMI measurement

# Radiated EMI measurement

# Radiated EMI measurement (490 MHz)

Unshielded: Narrow spike at 490.6 MHz is ~70 dB above noise floor

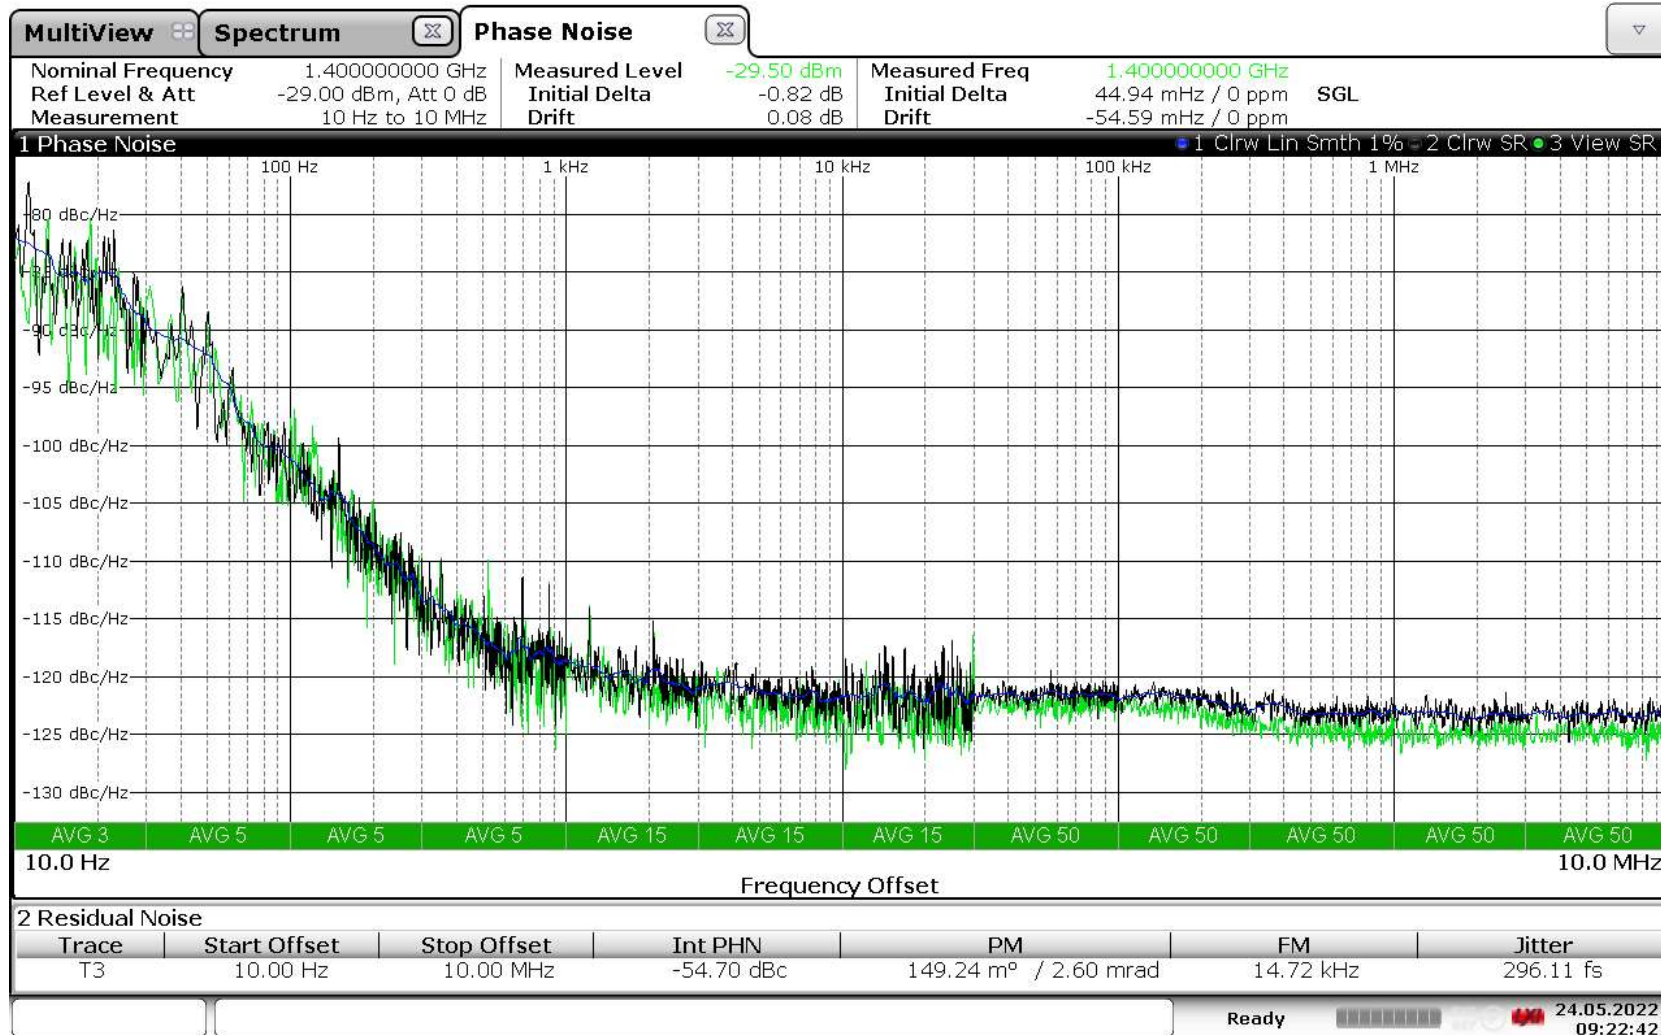

Shielded: no detectable emissions

# Injected Tone measurement

No modulation spurs visible in the LNA output when a tone is injected into the LNA input.

# Injected tone measurement (Phase noise)

09:22:43 24.05.2022

# Future measurements

Use an integrating GPU spectrometer to reduce the noise floor of the radiated EMI measurement.

# Summary

- The 'Jimble' RFSoc digitiser offers major advantages for PAF designs but requires careful shielding.
- This integrated module successfully shields and cools the Jimble and other electronics.
- Future plans to increase test sensitivity.
- Compact size and 4.3kg weight is ideal for PAF designs.
