Update Notes for APDP v1.1, June 2013.

Added in v1.1

1_Filter_by_truncation.pl : alternative filtering approach that eliminates requirement for reads to contain a match to a reverse primer sequence. Instead truncates all reads matching a forward primer sequence at a user-defined length.

Bug fixes in v1.1

3_Preliminary_validated_sequences_MS.pl : fixed minor bug where some sequences found only in a single sample were falsely rejected if another similar sequence was accepted. This does not affect any of the results in Morgan et al. (in review).
